Candoo How to use the Waze mobile App

Waze is a free, ad-supported interactive navigation app owned by Google and available for both iOS (iPad/iPhone) and Android. It uses your smartphone's GPS service to calculate routes between destinations and gathers information via social media-based crowdsourcing to alert you to road conditions while you drive. Drivers on the Waze platform act as the road's eyes and ears to alert other drivers about traffic, police, accidents, detours, speed traps, construction, and anything happening nearby or on your route.

Note: *Please exercise extreme caution while driving and using any app on your phone.*

In this guide, you will learn how to **plan a route and Report Incidents.**

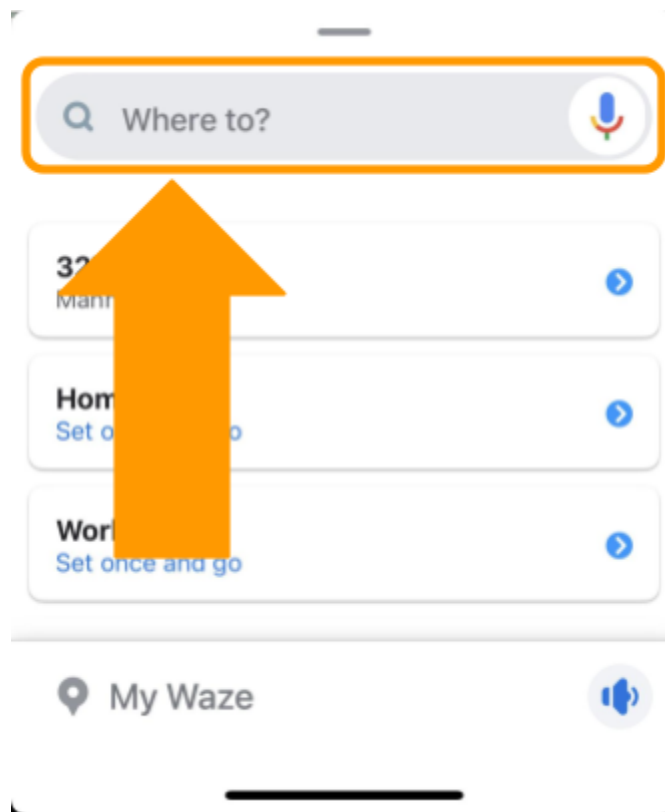

How to Plan a Route	2
How to Report Incidents	6

How to Plan a Route

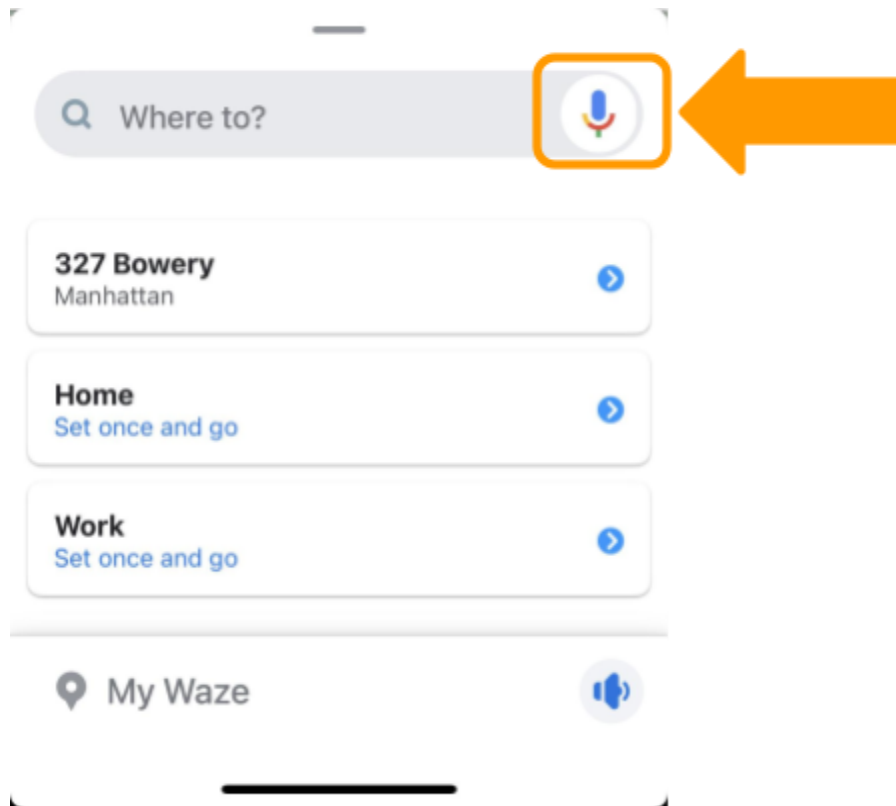

Step 1 – Tap open the Waze App. The App icon looks like this:

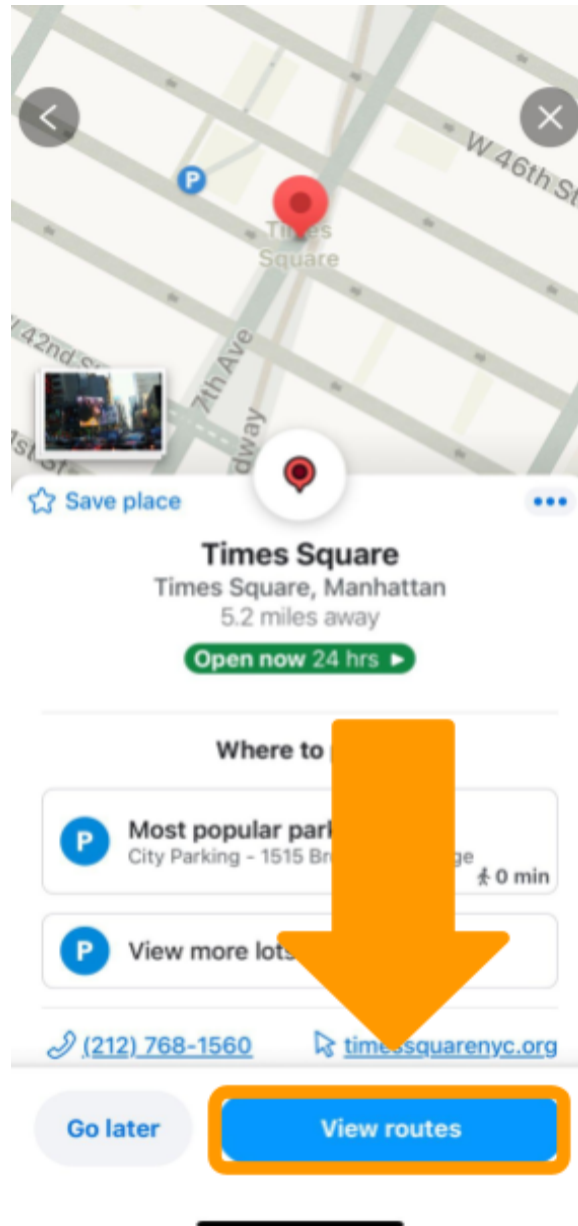

Step 2 – Tap the search bar that says “where to?” and type in the address of your destination in the search box.

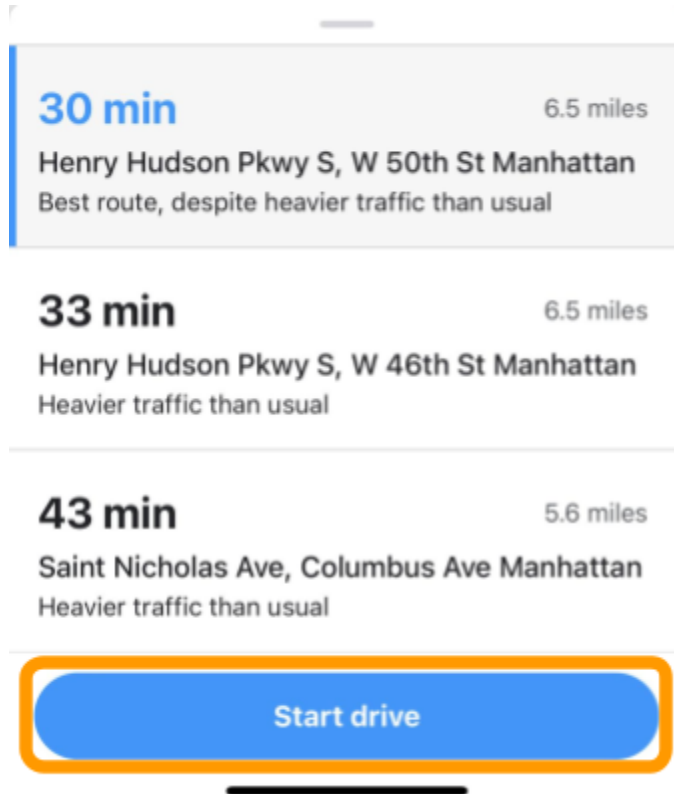

Or tap on the microphone icon at the top of the window to speak your destination.

Step 3 – Tap on “**View routes**” to view all routes to the desired destination.

Step 4 – Choose the desired route and tap on **“Start Drive”**

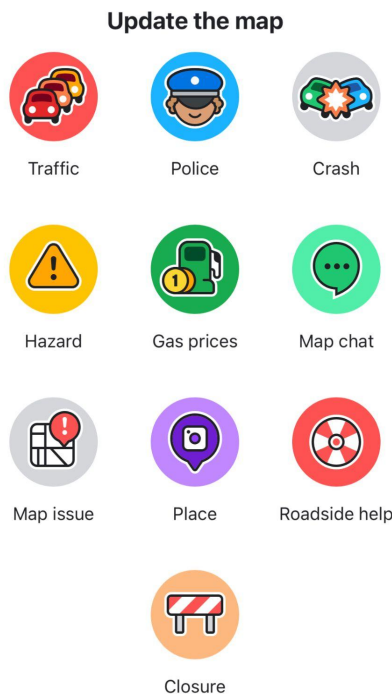

How to Report Incidents

On the Waze app you can report any road closures, heavy traffic Police activity, car crashes, etc to alert other drivers on the road.

Step 1 – Locate the “**update the map**” button.

Step 2 – Tap one of the choices to update the map and alert the other drivers using the Waze app.

Step 3 - To finish a report, tap on the type of issue on the road then tap **“send”** also you can leave comments and take photos.
